COURSE SCHEME

FOR

B.E. – CHEMICAL ENGINEERING

2019

<u>Applicable from July 2019 to Undergraduate Engineering</u>

CHEMICAL ENGINEERING DEPARTMENT –COURSE SCHEME

SEMESTER – I (Basket-2)

S.No.	COURSE NO.	TITLE	L	T	P	CR
1	UPH004	APPLIED PHYSICS	3	1	2	4.5
2	UTA017	COMPUTER PROGRAMMING- I	3	0	2	4.0
3	UEC001	ELECTRONIC ENGINEERING*	3	1	2	4.5
4	UTA015	ENGINEERING DRAWING	2	0	4	4.0
5	UHU003	PROFESSIONAL COMMUNICATION	2	0	2	3.0
6	UMA003	MATHEMATICS-I	3	1	0	3.5
TOTAL			**16**	**3**	**12**	**23.5**

SEMESTER – II (Basket-2)

S.No.	COURSE NO.	TITLE	L	T	P	CR
1	UCB008	APPLIED CHEMISTRY	3	1	2	4.5
2	UTA018	OBJECT ORIENTED PROGRAMMING	3	0	2	4.0
3	UEE001	ELECTRICAL ENGINEERING*	3	1	2	4.5
4	UEN002	ENERGY AND ENVIRONMENT	2	0	0	2.0
5	UTA013	ENGINEERING DESIGN PROJECT–I (MANGONEL) (4 SELF EFFORT HOURS)	1	0	2	4.0
6	UMA004	MATHEMATICS-II	3	1	0	3.5
7	UES009	MECHANICS^	2	1	2^	2.5
TOTAL			**17**	**4**	**8**	**25.0**

^ Only one lab session per semester.
* The lab sessions will be on every alternate week.

SEMESTER – III (Basket-2)

S.No.	COURSE NO.	TITLE	L	T	P	CR
1	UTA014	ENGINEERING DESIGN PROJECT-II (BUGGY) (4 SELF EFFORT HOURS)	1	0	2	4.0
2	UTA002	MANUFACTURING PROCESSES	2	0	2	3.0
3	UMA031	OPTIMIZATION TECHNIQUES	3	1	0	3.5
4	UES010	SOLIDS AND STRUCTURES*	3	1	2	4.5
5	UES011	THERMO-FLUIDS*	3	1	2	4.5
6	UCH301	MATERIAL AND ENERGY BALANCES	3	1	0	3.5
7		GENERIC ELECTIVE-I	2	0	0	2.0
TOTAL			**17**	**4**	**8**	**25.0**

SEMESTER – IV (Basket-2)

S.NO.	COURSE NO.	TITLE	L	T	P	CR
1	UES012	ENGINEERING MATERIALS	3	0	2	4.0
2	UMA007	NUMERICAL ANALYSIS	3	1	2	4.5
3	UCH303	CHEMICAL ENGINEERING THERMODYNAMICS	3	1	0	3.5
4	UCH401	FLUID AND PARTICLE MECHANICS	3	01	2	4.5
5	UCH402	HEAT TRANSFER	3	1	2	4.5
6	UCH507	CHEMICAL PROCESS INDUSTRIES	3	0	0	3.0
TOTAL			**18**	**4**	**8**	**24.0**

* The lab sessions will be on every alternate week.

SEMESTER-V

S.NO.	COURSE NO.	COURSE NAME	L	T	P	CR
1	UCH501	CHEMICAL REACTION ENGINEERING-I	3	1	2	4.5
2	UCH502	MASS TRANSFER-I	3	1	0	3.5
3	UCH503	INDUSTRIAL POLLUTION ABATEMENT	3	0	2	4.0
4	UCH506	PROCESS INSTRUMENTATION AND CONTROL	3	1	2	4.5
5	UCH405	ENERGY RESOURCES	3	1	2	4.5
6		GENERIC ELECTIVE-II	1	0	2	2.0
TOTAL			**16**	**4**	**10**	**23.0**

SEMESTER-VI

S.NO.	COURSE NO.	COURSE NAME	L	T	P	CR
1	UCH601	CHEMICAL REACTION ENGINEERING-II	3	1	0	3.5
2	UCH602	MASS TRANSFER-II	3	1	2	4.5
3	UCH603	TRANSPORT PHENOMENA	3	1	0	3.5
4	UCH802	PROCESS MODELING AND SIMULATION	3	0	2	4.0
5	UCH850	PETROLEUM AND PETROCHEMICALS	2	0	0	2.0
6	UTA012	INNOVATION & ENTREPRENEURSHIP	-	-	-	4.0
TOTAL			**14**	**3**	**4**	**21.5**

SEMESTER-VII

S.NO.	COURSE NO.	COURSE NAME	L	T	P	CR
1	UCH793	PROJECT SEMESTER*				15.0
TOTAL						**15.0**

*TO BE CARRIED OUT IN INDUSTRY/RESEARCH INSTITUTION

OR

.NO.	COURSE NO.	COURSE NAME	L	T	P	CR
1	UCH794	PROJECT				8.0
2		ELECTIVE-I	3	1	0	3.5
3		ELECTIVE-II	3	1	0	3.5
TOTAL			**6**	**2**	**0**	**15.0**

OR

UCH795:START- UP SEMESTER BASED ON HANDS ON WORK ON INNOVATIONS AND ENTREPRENEURSHIPOF 15 CREDITS.

SEMESTER-VIII

S.NO.	COURSE NO.	COURSE NAME	L	T	P	CR
1	UCH604	BIOCHEMICAL ENGINEERING	3	1	2	4.5
2	UCH605	PROCESS UTILITY AND INDUSTRIAL SAFETY	3	1	0	3.5
3	UHU005	HUMANITIES FOR ENGINEERS	2	0	2	3.0
4	UCH801	PROCESS ENGINEERING AND PLANT DESIGN	3	0	0	3.0
5	UCH893	CAPSTONE PROJECT	0	0	2	8.0
6		ELECTIVE-III	3	0	0	3.0
7		ELECTIVE-IV	3	0	0	3.0
TOTAL			**17**	**2**	**6**	**28.0**

Total Credits: 185

LIST OF PROFESSIONAL ELECTIVES

ELECTIVE I

S.NO.	COURSE NO.	COURSE NAME	L	T	P	CR
1	UCH711	FLUIDIZATION ENGINEERING	3	1	0	3.5
2	UCHXXX	ADVANCED SEPARATION PROCESSES	3	1	0	
3	UCH713	CORROSION ENGINEERING	3	1	0	

ELECTIVE II

S.NO.	COURSE NO.	COURSE NAME	L	T	P	CR
1	UCH701	CATALYTIC PROCESSES	3	1	0	3.5
2	UCH716	FOOD ENGINERING AND SCIENCE	3	1	0	3.5
3	UCH834	PROCESS INTEGRATION	3	1	0	3.5

ELECTIVE-III (Elective Focus Courses)

S.NO.	COURSE NO.	COURSE NAME	L	T	P	CR
1	UCHXXX	BIOENERGY ENGINEERING	3	0	0	3.0
2	UCHXXX	FUEL CELL TECHNOLOGY	3	0	0	3.0
3	UCH840	POLYMER SCIENCE AND TECHNOLOGY	3	0	0	3.0
4	UCHXXX	POLYMER BLENDS AND COMPOSITES	3	0	0	3.0
5	UCHXXX	PETROLEUM DRILLING AND PRODUCTION ENGINEERING	3	0	0	3.0
6	UCHXXX	NATURAL GAS ENGINEERING	3	0	0	3.0

ELECTIVE – IV (Elective Focus Courses)

S.NO.	COURSE NO.	COURSE NAME	L	T	P	CR
1	UCHXXX	MATERIALS AND DEVICES FOR ENERGY CONVERSION	3	0	0	3.0
2	UCHXXX	ENERGY MANAGEMENT	3	0	0	3.0
3	UCHXXX	POLYMER PROCESSING	3	0	0	3.0
4	UCHXXX	STRUCTURAL MATERIALS	3	0	0	3.0
5	UCHXXX	PETROLEUM RESERVOIR ENGINEERING AND FIELD DEVELOPMENT	3	0	0	3.0
6	UCHXXX	ENHANCED OIL RECOVERY TECHNIQUES	3	0	0	3.0

GENERIC ELECTIVE - I

SR. NO.	COURSE NO.	TITLE	L	T	P	CR

SYLLABUS

FOR

B.E. – CHEMICAL ENGINEERING

2019

UES011 THERMO-FLUIDS*

L	T	P	Cr
3	1	2	4.5

Course Objective
To understand basic concepts of fluid flow and thermodynamics and their applications in solving engineering problems.

Fluid Mechanics
- **Introduction**: Definition of a fluid and its properties
- **Hydrostatics**: Measurement of pressure, thrust on submerged surfaces
- **Principles of Fluid Motion**: Description of fluid flow, continuity equation, Euler and Bernoulli equations, Pitot total head and static tubes, venturi-meter, orifice-meter, rotameter,momentum equation and its applications
- **Pipe Flow**: Fully developed flow, laminar pipe flow, turbulent pipe flow, major and minor losses,hydraulic gradient line (HGL) and total energy line (TEL)
- **Boundary Layer**: Boundary layer profile, displacement, momentum and energy thickness

Thermodynamics
- **Introduction**: Properties of matter, the state postulate, energy, processes and thermodynamic systems
- **Properties of Pure Substances**: Property tables, property diagrams, Mollier diagram, phase change, equations of state (ideal gas)
- **Energy**: Energy transfer by heat, work and mass
- **First Law of Thermodynamics**: Closed system, open system, steady-flow engineering devices
- **Second Law of Thermodynamics**: Statements of the second law, heat engines, refrigeration devices, reversible versus irreversible processes, the Carnot cycle, entropy and entropy change.

Laboratory/Project programme

List of Experiments
1. Verification of Bernoulli’s theorem
2. Determination of hydrostatic force and its location on a vertically immersed surface
3. Determination of friction factor for pipes of different materials
4. Determination of loss coefficients for various pipe fittings
5. Verification of momentum equation
6. Visualization of laminar and turbulent flow, and rotameter
7. Calibration of a venturi-meter
8. Boundary layer over a flat plate

***Lab to be conducted every alternate week.**

Sample List of Micro-Projects
Students in a group of 4/5 members will be assigned a micro project.
1. Design a physical system to demonstrate the applicability of Bernoulli’s equation
2. Determine the pressure distribution around the airfoil body with the help of wind tunnel

3. Demonstrate the first law of thermodynamics for an open system, for example: a ordinary hair dryer
4. Develop a computer program for solving pipe flow network

Course Learning Outcomes (CLO):

Upon completion of this course, the students will be able to:

1. Analyze and solve problems of simple fluid based engineering systems including pressures and forces on submerged surfaces
2. Analyze fluid flow problems with the application of the mass, momentum and energy equations
3. Evaluate practical problems associated with pipe flow systems
4. Conceptualize and describe practical flow systems such as boundary layers and their importance in engineering analysis
5. Estimate vapor-liquid properties and solve basic problems using steam tables, Mollier diagrams and equation of state
6. Analyze and solve problems related to closed systems and steady-flow devices by applying the conservation of energy principle
7. Analyze the second law of thermodynamics for various systems and to evaluate the performance of heat engines, refrigerators and heat pumps

Text Books:

1. *Kumar, D. S, Fluid Mechanics and Fluid Power Engineering, S. K. Kataria (2009).*
2. *Cengel and Boles, Thermodynamics: an Engineering Approach, McGraw-Hill (2011).*

Reference Books:

1. *Jain, A. K. , Fluid Mechanics: including Hydraulic Machines, Khanna Publishers (2003).*
2. *Rao, Y.V. C, An Introduction to Thermodynamics, Universities Press (2004).*

Evaluation Scheme:

S. No.	Evaluation Elements	Weightage (%)
1	MST	25
2	EST	40
3	Sessional (may be tutorials/ quizzes/ assignments/lab/ project)	35

UCH301 MATERIAL AND ENERGY BALANCES

L	T	P	Cr
3	**1**	**0**	**3.5**

Course Objective:
To understand and apply the basics of calculations related to material and energy flow in the processes.

Introduction: Units and dimensions, Stoichiometry of chemical equations, Mole and weight fractions, Unit operations and unit processes with reference to material and energy balance calculations.

Behaviour of Gas and Liquid Mixtures: Gas laws, Raoult's law, Henry's law, Duhring's plot, Saturation, Partial saturation, Relative saturation, Real gases, Bubble point and dew point temperatures.

Material Balance Calculations: Law of conservation of mass, General material balance equation, Material balance calculations without chemical reactions, Material balance calculations with chemical reactions, Recycling, Bypass, Purge, Analysis of degrees of freedom.

Energy Balance Calculations: General energy balance equation, Internal energy, Enthalpy, Heat capacity of gases, liquids, and solids, Latent heats, Heats of formation, combustion, reaction and dissolution, Enthalpy-concentration chart, Fuel heating value, Theoretical flame temperature, Energy balance calculations in unit operations and systems with and without chemical reactions, Humidity and psychrometric chart, Energy balance calculations in humidification and adiabatic cooling.

Sample List of Micro-Projects
Students in a group of 4/5 members will be assigned a micro project.

1. Complete material balances on a process flow sheet
2. Energy balances on a complete process flow sheet
3. Analyze the degrees of freedom for a complete process

Course Learning Outcomes (CLO)

Upon completion of this course, the students will be able to:

1. perform material balance for problems without chemical reactions.
2. perform material balance for problems involving chemical reactions.
3. perform energy balance for problems without chemical reactions.
4. perform energy balance for problems involving chemical reactions.

Text Books:

1. *Himmelblau, D.M. and Riggs, J.B., Basic Principles and Calculations in Chemical Engineering, Prentice Hall of India (2003).*
2. *Bhatt, B.I. and Vora, S.M., Stoichiometry, Tata McGraw Hill (2004).*

Reference Books:

1. *Hougen, O.A., Watson, K.M. and Ragatz, R.A., Chemical Process Principles, Volume-I, C.B.S. Publications (2004).*
2. *Felder, R.M, and Rousseau, R.W., Elementary Principles of Chemical Processes, C.B.S. Publications (2000).*

Evaluation Scheme:

S. No.	Evaluation Elements	Weightage (%)
1	MST	30
2	EST	45
3	Sessional (may be tutorials/ quizzes/ assignments/ project)	25

UCH303 CHEMICAL ENGINEERING THERMODYNAMICS

L	T	P	Cr
3	1	0	3.5

Course Objective:
To understand the theory and applications of classical thermodynamics, thermodynamic properties, equations of state, methods used to describe and predict phase equilibria.

Introduction: Laws of thermodynamics and their applications to real processes, Heat capacities, Heat effects during: Phase change, formation, combustion and mixing, Enthalpy-concentration diagram, Thermodynamic analysis of flowing fluids.

Thermodynamic Properties of Fluids and Equations of State: Relationships among thermodynamic properties, Behavior of gases in multi-component systems, Thermodynamic properties of gases and their mixtures, Thermodynamic diagrams, Equations of state and generalized property correlations for gases.

Vapour-Liquid Equilibria and Solution Thermodynamics: Criteria for equilibrium, Fugacity of gases and liquids, Composition of phases in equilibrium, Generalized correlations for the fugacity coefficients, Models for the excess Gibbs energy, Effect of pressure and temperature on phase behavior, Chemical reaction equilibria.

Refrigeration and Liquefaction: Refrigeration cycle, Vapor compression cycle, Eco-friendly refrigerants, Absorption and adsorption refrigeration, Liquefaction processes.

Course Learning Outcomes (CLO)
Upon completion of this course, the students will be able to:

1. apply fundamental concepts of thermodynamics to engineering applications.
2. estimate thermodynamic properties of substances in gas and liquid states.
3. estimate thermodynamic parameters for solutions, vapor-liquid equilibria and chemical reaction equilibria.
4. determine efficiency of thermodynamic cycles.

Text Books:

1. *Smith J. M. and Van Ness H. C., Chemical Engineering Thermodynamics, Tata McGraw-Hill (2007).*
2. *Rao, Y. V. C., Chemical Engineering Thermodynamics, University Press (1997).*

Reference Books:

1. *Weber, H. C. and Meissner, H. P., Thermodynamics for Chemical Engineers, John Wiley, (1970).*
2. *Hougen, O.A., Watson, K.M. and Ragatz, R.A., Chemical Processes Principles (Thermodynamics), Part 2, C.B.S. Publications (2006).*

Evaluation Scheme:

S. No.	Evaluation Elements	Weightage (%)
1	MST	30
2	EST	45
3	Sessional (may be tutorials/quizzes/ assignments etc.)	25

UCH401 FLUID AND PARTICLE MECHANICS

L	T	P	Cr
3	1	2	4.5

Course Objective:
To understand basic principles of fluid and particle mechanics including construction and working of the equipments.

Particle Characterization and Handling: Determination of mean particle size, Particle shape and size distribution, Screen analysis, Storage of solids, conveying systems.

Size Reduction: Laws of size reduction, Industrial size reduction equipment.

Fluid-Solid Separations: Free and hindered settling, Clarification and thickening, Froth flotation, Centrifugal separation, Theory of filtration and filtration equipment

Packed and Fluidized Bed: Friction in flow through packed beds, Mechanism of fluidization, Determination of minimum fluidization velocity, Determination of velocity range for the operation of a fluidized bed.
Agitation and Mixing of Liquids: Types of impellers, Power consumption, mixing times, Scale up.
Pumps and Compressors: Types, Working principles, Basic equations, NPSH, Cavitation, Priming.

Flow of Compressible Fluids: Basic equations: Adiabatic, isothermal and isentropic flows.

Laboratory Work:
Screen analysis, Power requirement in mixing, Plate and frame filter press, Leaf filter, Elutriation, Pressure drop in fluidized bed and packed bed, Sedimentation, Centrifugal pump characteristics, Size reduction, Cyclone separator.

Course Learning Outcomes (CLO)
Upon completion of this course, the students will be able to:

1. solve and analyze problems of size reduction and solid-solid separation methods.
2. analyze and design of equipment handling fluid-particle systems.
3. analyze mixing process, and sizing of hoppers and bins and selection of suitable solid conveying systems.
4. analyze and solve problems related to flow through beds of solids.
5. solve the problems related to compressible fluids, and fluid machinery.

Text Books:

1. *McCabe, W.L., Smith, J.C., and Harriot, P., Unit Operations of Chemical Engineering, McGraw-Hill (2005).*
2. *Richardson, J.F., Harker, J.H. and Backhurst, J.R., Coulson and Richardsons Chemical Engineering, Vol. 2, Butterworth-Heinemann (2007).*

Reference Books:

1. *Foust, A.S, Wenzel, L.A, Clump, C.W., Maus, L. and Anderson, L.B., Principles of Unit Operations, John Wiley (2008).*
2. *Perry, R.H, and Green, D.W., Perry's Chemical Engineers' Handbook, McGraw Hill (2007).*
3. *Narayanan, C.M. and Bhattacharya, B.C., Mechanical Operations for Chemical Engineers Incorporating Computer Aided Analysis, Khanna Publishers (2005).*

Evaluation Scheme:

S. No.	Evaluation Elements	Weightage (%)
1	MST	25
2	EST	35
3	Sessional (May include may be lab/tutorials/ assignments/ quiz's etc.)	40

UCH402 HEAT TRANSFER

L	T	P	Cr
3	1	2	4.5

Course Objective:
To understand the fundamentals of heat transfer and their applications in various heat transfer equipment design of process industries.

Introduction: Introduction, Applications, Relation between heat transfer and thermodynamics, Transport properties, Heat transfer coefficients.

Heat Transfer mechanisms: Fourier's law, Thermal conductivity, Heat conduction equations and applications, Newton's law of cooling, Boundary layer theory, Heat transfer in laminar and turbulent flows inside tubes, Heat transfer analogies, Natural convection, Boiling & Condensation, Stefan - Boltzmann law, Radiation equations, Emissivity, Absorption, Black and gray body, Thermal radiation between two surfaces and its applications.

Heat Transfer Equipment Design: Cross flow and counter flow arrangements, Process design calculations for heat transfer equipment, Fouling in heat transfer equipment, Classification of heat exchangers, LMTD and ε-NTU methods, Design of plate type & shell and tube heat exchangers, Estimation of heat transfer coefficients and pressure drop by Kerns' and Bell's methods, Double pipe, shell and tube, Design codes, Evaporators, Classification, Single and multiple effect evaporators, Enthalpy balance, Performance of evaporators, Capacity and economy, Methods of feeding, Fundamentals of Condenser design.

Laboratory Work:
Thermal conductivity of a metal rod, Thermal conductivity of insulating power, Emissivity measurement, Parallel flow/counter flow heat exchanger, Heat transfer through composite wall, Drop wise & film wise condensation, Heat transfer through a pin-fin, Heat transfer in natural convection, Heat transfer in forced convection, Critical heat flux, Stefen-Boltzman's law of radiation, Heat flow through lagged pipe, Shell and tube heat exchanger.

Course Learning Outcomes (CLO)
Upon completion of this course, the students will be able to:

1. solve conduction, convection and radiation problems
2. design and analyse the performance of heat exchangers
3. design and analyse the performance of evaporators & condensers

***Text Books*:**
1. *McCabe, W.L., Smith J.C., and Harriott, P., Unit Operations of Chemical Engineering, McGraw-Hill (2005).*
2. *Holman, J.P., Heat Transfer, Tata McGraw-Hill Education (2008).*
3. *Sinnott Ray and Towler Gavin, Coulson and Richardson's Chemical Engineering series Chemical Engineering Design Volume 6, 5th edition (2013).*

***Reference Books*:**
1. *Kern, D.Q., Process Heat Transfer, Tata McGraw-Hill (2008).*

4. *Alan, S.F., Leonard, A.W. and Curtis, W.C., Principles of Unit Operations, Wiley India (P) Ltd., (2008).*

Evaluation Scheme:

S. No.	Evaluation Elements	Weightage (%)
1	MST	25
2	EST	35
3	Sessional (may include lab/tutorials/ assignments/ quizzes)	40

UCH507 CHEMICAL PROCESS INDUSTRIES

L	T	P	Cr
3	0	0	3.0

Course Objective:
To study process technologies of various organic and inorganic process industries.

Introduction: Production trends, Material and energy balances, Symbols and flow sheets, Waste generation and recycling, Engineering problems, Materials of construction, Environmental and energy conservation measures.

Pulp and Paper: Cellulose derivatives: Pulp, paper and boards, Types of raw material for pulping, Various pulping methods, Recovery of chemicals from black liquor, Manufacture of paper, Quality improvement of paper.

Sugar and Starch: Raw and refined sugar, Byproducts of sugar industries, Starch and starch derivatives.

Oils and Fats: Types of oil, Different fatty acids, Extraction of oil from seeds, Oil purification, Hydrogenation of oil.

Soaps and Detergents: Types of soaps, Soap manufacture, recovery and purification.

Chlor-alkali Industries: Brine electrolysis, Manufacture of caustic soda and chlorine in mercury cells, Diaphragm cells, Membrane cells, Hydrochloric acid.
Nitrogen Industries: Ammonia, Nitric acid, Ammonium sulphate, Ammonium nitrate, Urea, Calcium ammonium nitrate.

Phosphorus Industries: Phosphorus, Phosphoric acid, Phosphatic fertilizers.

Mixed Fertilizers: SSP, TSP, NPK, KAP, DAP, Nitrophosphate, Bio fertilizers.

Sulphur Industries: Sulphur dioxide, Sulphuric acid, Oleum.

Ceramic Industries: Portland cement, Lime, Gypsum.

Course Learning Outcomes (CLO)
Upon completion of this course, the students will be able to:

5. understand the processes involved in manufacturing of various inorganic and organic chemicals.
6. prepare the process flow diagrams.
7. analyze important process parameters and engineering problems during production.

Text Books:

8. *Dryden, C.E., Outlines of Chemical Technology (Edited and Revised by M. Gopal Rao and Sittig. M), East West Press Pvt. Ltd, New Delhi (1997).*
9. *Austin, G.T., Shreve's Chemical Process Industries, McGraw Hill (1984).*

12. *Groggins, P.H., Unit Processes in Organic Synthesis, Tata McGraw-Hill (2003).*

Evaluation Scheme:

S. No.	Evaluation Elements	Weightage (%)
1	MST	30
2	EST	50
3	Sessional (May includes seminar assignments/ quiz's etc.)	20

UCH501 CHEMICAL REACTION ENGINEERING-I

L	T	P	Cr
3	**1**	**2**	**4.5**

Course Objective:

To understand the kinetics of single and multiple reactions and the effect of temperature on reaction systems.

Introduction: Overview of chemical reaction engineering, Classification of reactions, Variables affecting rate, Definition of reaction rate, single and multiple reactions, Elementary and non-elementary reactions, Molecularity and order of reaction, Reaction pathways, Effects of temperature, pressure, Heat and mass transfer on rate, Arrhenius law**,** Activation energy, Reversible and irreversible reactions, Reaction equilibrium.

Kinetics: Constant volume and variable volume batch, CSTR and PFR reactor data, Analysis of total pressure data obtained from a constant-volume batch reactor, Integral and differential methods of analysis of data, Autocatalytic reactions, Reversible reactions, and Bio-chemical reactions.

Homogeneous Single Reactions: Performance equations for ideal batch, Plug flow, Back-mix flow and semi batch reactors for isothermal condition, Size comparison of single reactors, Multiple-reactor systems, Recycle reactor, Autocatalytic reactions, Optimum recycle operations.

Multiple Reactions: Parallel reactions of different orders, Yield and selectivity, Product distribution and design for single and multiple-reactors, Series reactions: first-order reactions and zero-order reactions, Mixed series parallel complex reactions, Choice of reactors for simple and complex reactions.

Temperature Effects for Single and Multiple Reactions: Thermal stability of reactors and optimal temperature progression for first order reversible reactions, Adiabatic and heat regulated reactions, Design of non-isothermal reactors, Effect of temperature on product distribution for series and parallel reactions.

Laboratory work: Experiments on batch reactors, Semi-batch reactors, Continuous stirred tank reactors, Tubular reactors, RTD, Fluid-solid reactions.

Course Learning Outcomes (CLO):

Upon completion of this course, the students will be able to:

1. develop rate laws for homogeneous reactions.
2. analyze batch reactor data by integral and differential methods.
3. design ideal reactors for homogeneous single and multiple reactions.
4. select the appropriate type reactor/scheme.
5. demonstrate the temperature effect on reaction rate and design non-isothermal reactors..

S. No.	Evaluation Elements	Weightage (%)
1	MST	25
2	EST	35
3	Sessional (May includes lab/tutorials/ assignments/ quiz's etc)	40

UCH502 MASS TRANSFER-I

L	T	P	Cr
3	1	0	3.5

Course Objective: To impart the knowledge of mass transfer operations and equipment.

Introduction: Overview of separation processes.

Diffusion: Steady state molecular diffusion in gases and liquids, Fick's first Law of diffusion, Fick's second Law of diffusion, Correlation for diffusivity in gases and liquids for binary and multi-component systems, Diffusivity measurement and prediction, Diffusion in solids, Types of solid diffusion.

Mass Transfer Coefficients: Concept of mass transfer coefficients, Mass transfer coefficients in laminar flow and turbulent flow, Mass, heat and momentum transfer analogy etc. Simultaneous heat and mass transfer.

Interphase Mass Transfer: Equilibrium curve, Diffusion between phases, Overall mass transfer coefficient, Two film theory in mass transfer, Steady state concurrent and counter current Process, Stages and Multistage cascade, Kremser equation for dilute gas mixtures.

Mass transfer equipment: Gas dispersed: bubble column, Mechanically agitated vessels, Mechanical agitation of single phase liquid, Mechanical agitation of gas liquid contact, Venturi scrubber, Wetted Wall tower, Spray tower, Tray tower, Packed tower, Classification of packing materials, Cooling tower.

Gas Absorption: Equilibrium solubility of gases in liquids, isothermal and adiabatic gas-liquid contact, Choice of solvents, Material balance in absorber, Counter-current multistage operations, Continuous contact equipment, Design of absorption towers, Gas absorption with chemical reaction. Packed towers and column internals, Types of packing, general pressure drop correlation, Column diameter and height.

Crystallization: Solid liquid phase equilibrium, Nucleation and crystal growth, Batch crystallization, crystallization equipment.

Drying: Drying Equilibria, The drying rate curve, calculations of the drying time from drying rate data, Classification of the drying equipment, Dryer selection, and Different type of dryer.

Pressure vessels design: Design pressure, Design temperature, Design stress, Factor of safety, Design wall thickness, Corrosion allowance, Weld joint efficiency factor, thin & thick wall cylindrical and spherical vessels, Tall vessels, Storage vessels.

Course Learning Outcomes (CLO):

Upon completion of this course, the students will be able to:

1. solve problems related to diffusion and interphase mass transfer and mass transfer equipments
2. perform design calculation related to absorption and humidification.
3. solve problems related to drying and crystallization
4. Design different types of pressure vessels

UCH506 PROCESS INSTRUMENTATION AND CONTROL

L	T	P	Cr
3	1	2	4.5

Course Objective:
To analyze the system behavior for the design of various control schemes, and to gain knowledge of different process instruments.

Introduction: General Principles of process control, Time domain, Laplace domain and frequency domain dynamics and control.

Linear Open-loop Systems: Laplace domain analysis of first and second orders systems, Linearization, Response to step, pulse, impulse and ramp inputs, Physical examples of first and second order systems such as thermocouple, level tank, U-tube manometer, etc., Interacting and non-interacting systems, Distributed and lumped parameter systems, Dead time.

Linear Closed-loop Systems: Controllers and final control elements, Different types of control valves and their characteristics, Development of block diagram, Transient response of simple control systems, Stability in Laplace domain.

Frequency Response: Frequency domain analysis, Control system design by frequency response, Bode stability criterion, Different methods of tuning of controllers.

Process Applications: Introduction to advanced control techniques as feed forward, feedback, cascade, ratio, etc., Application to equipment such as distillation-columns, reactors, etc.

Instrumentation: Classification of measuring instruments, Elements of measuring instruments, Instruments for the measurement of temperature, pressure, flow, liquid level, and moisture content, Instruments and sensors for online measurements.

Laboratory Work: Dynamics of first order and second order systems, Valve characteristics, Interacting and non-interacting systems, Flow, level and temperature measurement and their control using proportional, proportional-integral and proportional-integral-derivative control action, Manual and closed loop controls, Positive and negative feedback control, Tuning of controller, Step, pulse, impulse and frequency response.

Course Learning Outcomes (CLO):

Upon completion of this course, the students will be able to:

1. set up a model, analyse and solve the first and second order system for its dynamic behaviour
2. evaluate the process stability in Laplace domain
3. design control system using frequency response analysis
4. identify advanced control techniques for chemical process.

UCH405 ENERGY RESOURCES

L	T	P	Cr
3	1	2	4.5

Course Objective:
To study various types of conventional and non-conventional energy resources including solid, liquid and gaseous fuels.

Energy Scenario: Indian and global, Present and future energy demands, Energy crisis, Classification of various energy sources, Renewable and non-renewable energy sources, Pattern of energy consumption.

Solid Fuels: Coal: Origin, formation, analysis, classification, washing and carbonization, Treatment of coal gas, Recovery of chemicals from coal tar, Coal gasification, Liquid fuel synthesis from coal, Carbonization of coal, Briquetting of fines.

Liquid and Gaseous Fuels: Crude petroleum, Physical processing of crude petroleum, Fuels from petroleum, Storage and handling of liquid fuels, Natural and liquefied petroleum gases, Gas hydrates, Gasification of liquid fuels, Carbureted water gas.

Fuel Characterization: Viscosity, Viscosity index, Flash point, Cloud point, Pour point, Fire point, Smoke point and Char value, Carbon residue, Octane number, Cetane number, Aniline point and Performance number, Acid value, ASTM distillation, Calorific value, Proximate and ultimate analysis.

Alternate Energy Sources: Solar energy: Radiation measurement, applications and types of collectors and storage, Wind power, Geothermal energy, Tidal energy, Nuclear power, Fuel cells, Biogas, Biomass.

Laboratory Work:
Experiments on proximate and ultimate analysis of fuels, Orsat analysis, Surface tension, Cloud & pour point, Flash point, Viscosity, Melting point, Reid vapor pressure, ASTM distillation, Saponification value.

Course Learning Outcomes (CLO):

Upon completion of this course, the students will be able to:

1. analyze the energy scenario of the world.
2. carry out a comparative analysis of different types of coal, including their treatment, liquefaction and gasification.
3. compare the liquid and gaseous fuels sourced from petroleum including their characterization.
4. analyze the potential of alternate energy sources and their scope and limitations.
5. solve energy related problems related to combustion and non-combustion.

UCH503 INDUSTRIAL POLLUTION ABATEMENT

L	T	P	Cr
3	0	2	4.0

Course Objective:
To understand the important issues and their abatement principles of industrial pollution.

Introduction: Industrial pollution, Different types of wastes generated in an industry, Different water pollutants, Air pollutants and solid wastes from industry.

Water Pollution: Identification, quantification and analysis of wastewater, Classification of different treatment methods into physico-chemical and biochemical techniques, Physico-chemical methods,General concept of primary treatment, Liquid-solid separation, Design of a settling tank, Neutralization and flocculation, Disinfection, Biological methods,Concept of aerobic digestion, Design of activated sludge process, Concept of anaerobic digestion, Biogas plant layout, Different unit operations and unit processes involved in conversion of polluted water to potable standards.

Air Pollution: Classification of air pollutants, Nature and characteristics of gaseous and particulate pollutants, Analysis of different air pollutants, Description of stack monitoring kit and high volume sampler, Atmospheric dispersion of air pollutants, Gaussian model for prediction of concentration of pollutant down wind direction, Plume and its behavior, Operating principles and simple design calculations of particulate control devices, Brief concepts of control of gaseous emissions by absorption, adsorption, chemical transformation and combustion.

Solid Wastes: Analysis and quantification of hazardous and non-hazardous wastes, Treatment and disposal of solid wastes, Land filling, Leachate treatment, Incineration.

Laboratory work: Characterization of wastewater (pH, BOD, COD, Nitrate, Phosphate, Solids, Turbidity, Alkalinity, Hardness, Dissolved oxygen and fluoride), Ambient air quality measurement by high volume sampler (Particulate, SO_X, NO_X), Gas analysis with Orsat apparatus, Determination of sludge volume index.

Course Learning Outcomes (CLO):

Upon completion of this course, the students will be able to:

1. quantify and analyze the pollution load.
2. analyze/design of suitable treatment for wastewater
3. model the atmospheric dispersion of air pollutants.
4. Selection and design of air pollution control devices.
5. analyze the characteristics of solid waste and its handling & management.

UCH601 CHEMICAL REACTION ENGINEERING II

L	T	P	Cr
3	**1**	**0**	**3.5**

Course Objective:

To understand the effect of non-ideal flow on reactor performance and to design reactors for heterogeneous reaction systems.

Non-ideal Flow: Residence time distribution (RTD) of fluids in vessels, RTD models - dispersion, tanks-in-series and multi-parameter models, Conversion calculations using RTD data for first order reactions.

Non-catalytic Heterogeneous Reactions: Fluid-solid reaction models, Fluid-Solid reaction kinetics, Determination of rate controlling step, Prediction of mean conversion in flow reactors, Fluid-solid contacting schemes, Reactor design.

Solid-catalyzed Reactions: Interaction of physical and chemical rate processes, Kinetics of catalytic reactions and application to reactor design for isothermal and adiabatic operations, Design of packed bed and fluidized bed reactors, Introduction to slurry and trickle-bed reactors.

Fluid-fluid Reactions: Introduction to fluid-fluid reaction systems, Rate equations, Reactor design with and without mass transfer considerations.

Laboratory work: Experiments on Batch reactor, Semi-batch reactor, Continuous stirred tank reactor, Tubular reactor, RTD studies, Fluid-solid reaction.

Course Learning Outcomes (CLO):

Upon completion of this course, the students will be able to:

1. predict the conversion in a non-ideal reactor using tracer information.
2. design reactors for fluid-solid reactions.
3. design reactors for catalytic reactions.
4. design towers for gas–liquid reactions with and without mass transfer considerations.

Text Books:

UCH602 MASS TRANSFER-II

L	T	P	Cr
3	1	2	4.5

Course Objective: To impart the knowledge of separation processes like distillation, adsorption, and extraction.

Distillation: Vapor-liquid equilibria, Flash distillation, Differential distillation, Continuous Rectification- Binary system, Steam distillation, Multistage tray tower- McCabe-Thiele method, Ponchon-Savarit method, types of plate contractors, Distillation in a packed tower, Principles of azeotropic and extractive distillation, Bubble point and dew point calculation of multi-component system, Introduction to multi-component distillation.

Liquid-Liquid Extraction: Equilibrium relationship for partially miscible and immiscible systems, Selectivity and choice of solvent, Stage wise contact, Single stage and multistage extraction, Determination of number of equilibrium stages by graphical methods.

Adsorption: Adsorption equilibria, Batch and continuous adsorption, Selection of adsorbent, specific surface area of an adsorbent, Break-through curve.

Solid-Liquid Extraction: Classification of solid liquid extraction systems, Solid liquid contacting equipment.

Mass transfer Equipment Design: Process design calculations for multi-component distillation, Fenske-Underwood-Gilliland Method, Selection of key components, Fenske equation for minimum equilibrium stage, Gilliland correlations for actual reflux ratio and theoretical stages, Minimum reflux ratio by Underwood method, Feed stage location types of plate contractors, tray layout and hydraulic design, Packed towers–column internals, Types of packing, General pressure drop correlation, Column diameter and height.

Laboratory work: Study of vapour liquid equilibria, Cross current leaching, HETP in a packed distillation column operating under total reflux, Liquid in air diffusion, Liquid-liquid extraction apparatus, Absorption in packed bed apparatus, Wetted wall column, Solid in air diffusion apparatus, Batch drying unit, Batch distillation apparatus, Batch crystallizer, Water cooling tower, Steam distillation apparatus.

Course Learning Outcomes (CLO):

Upon completion of this course, the students will be able to:

1. use the phase equilibrium concepts in mass transfer related problems.

2. solve problems related to adsorption.

3. solve problems related to liquid-liquid and solid-liquid extraction.

4. design different types of mass transfer equipment.

Text Books:

1. Treybal, R.E., Mass Transfer Operations, McGraw Hill (1980).

2	EST	35
3	Sessional (May includes lab/ tutorials/ assignments/ quiz's etc)	40

UCH603 TRANSPORT PHENOMENA

L	T	P	Cr
3	1	0	3.5

Course Objective:
To impart knowledge about individual and simultaneous momentum, heat and mass transfer, model development along with appropriate boundary conditions.

Introduction: Viscosity and generalization of Newton's law of viscosity, Thermal conductivity and mechanism of energy transport, Diffusivity and mechanism of mass transport, Basic concept and review of classical momentum, heat and mass transfer problems.

Momentum Transport: Shell momentum balance, velocity distribution in laminar incompressible flow, The equations of change for isothermal flow: Equations of continuity, motion, conservation of mechanical energy in fluids, Application of Navier-Stokes equation, , Stream function, Potential flow, Boundary layer theory, Velocity and pressure distributions with more than one independent variables, Unsteady flow.

Turbulent flow: Velocity distribution in turbulent flow,fluctuations and time smoothened equations for velocity, Time smoothed of equation of change for incompressible fluids, Reynolds stress, Empirical relations.

Energy Transport: Shell energy balance, temperature distribution in solids and laminar flow, Equations of change for non-isothermal flow - Equations of energy, Energy equation in curvilinear coordinates, set-up of steady state heat transfer problems, Temperature distributions with more than one independent variables, Unsteady heat transfer.

Mass Transfer: Shell mass balance and concentration distribution in solids and laminar flow, Equations of change for multi-component systems: Equations of continuity for a binary mixture, Equation of continuity in curvilinear coordinates, Multi-component equations of change in terms of the flows, Multi component fluxes in terms of the transport properties, Use of equations of change to setup diffusion problems, Unsteady mass transfer.

Simulations momentum, heat and mass transfer: Simultaneous momentum, heat and mass transfer in laminar and turbulent flow regimes, Temperature and concentration distribution in turbulent flow, time smoothed equations of change for incompressible non-isothermal flow, Concentration fluctuation and time smoothed concentration, time smoothed equation of continuity.

Course Learning Outcomes (CLO):

Upon completion of this course, the students will be able to:

1. analyze heat, mass, and momentum transport in a process.
2. formulate problems along with appropriate boundary conditions.
3. develop steady and transient solution for problems involving heat, mass, and momentum transport.

3	Sessional (May includes tutorials/ assignments/ quiz’s etc)	25

UCH802 PROCESS MODELING AND SIMULATION

L	T	P	Cr
3	0	2	4.0

Course Objective:
To study the modeling& simulation techniques of chemical processes and to gain skills in using process simulators.

Introduction: Use and scope of mathematical modeling, Principles of model formulation, Role and importance of steady-state and dynamic simulation, Classification of models, Model building, Modeling difficulties, Degree-of-freedom analysis, Selection of design variables, Review of numerical techniques, Model simulation.

Fundamental Laws: Equations of continuity, energy, momentum, and state, Transport properties, Equilibrium and chemical kinetics, Review of thermodynamic correlations for the estimation of physical properties like phase equilibria, bubble and dew points.

Modeling of Specific Systems: Constant and variable holdup CSTRs under isothermal and non-isothermal conditions, Stability analysis, Gas phase pressurized CSTR, Two phase CSTR, Non-isothermal PFR, Batch and semi-batch reactors, Heat conduction in a bar, Laminar flow of Newtonian liquid in a pipe, Gravity flow tank, Single component vaporizer, Multi-component flash drum, Absorption column, Ideal binary distillation column and non-ideal multi-component distillation column, Batch distillation with holdup etc.

Simulation: Simulation of the models, Sequential modular approach, Equation oriented approach, Partitioning and tearing, Introduction and use of process simulation software (Aspen Plus/ Aspen Hysys) for flow sheet simulation.

Laboratory:
Writing and solving models for simple chemical processes, use of process simulator for solving models for mixer, pump, compressor, heat exchanger, reactor, absorption/distillation column and steady state flow sheet simulation.

Course Learning Outcomes (CLO):

Upon completion of this course, the students will be able to:

1. analyze physical and chemical phenomena involved in various process.
2. develop mathematical models for various chemical processes.
3. use various simulation approaches.
4. Simulate a process using process simulators (ASPEN Plus/ ASPEN Hysys).

2	EST	40
3	Sessional (may includes tutorials/ assignments/ quiz's etc)	35

UCH850 PETROLEUM AND PETROCHEMICALS

L	T	P	Cr
2	0	0	2.0

Course Objective:

To impart knowledge of petroleum refining, hydrocarbon processing, and derived petrochemicals.

Introduction: World petroleum resources, Petroleum industries in India, Chemistry and composition of crude oil, Transportation and pretreatment of crude oil, New trends in refinery.

Classification and Characterization: Classification of petroleum, Characterization of petroleum fractions.

Crude oil distillation: Impurities in crude oil,Desalting of crude oil, Atmospheric distillation and vacuum distillation units.

Conversion Processes: Thermal conversion processes, Conventional vis-breaking and soaker visbreaking process, Coking processes, Catalytic conversion processes, Fluid catalytic cracking, Catalytic reforming, Hydrocracking, Catalytic alkylation, Catalytic isomerization and catalytic polymerization.

Finishing Processes: Sulphur conversion processes, Sweetening processes, Solvent extraction process, Hydrotreating process.

Lube oil manufacturing Processes: Solvent extraction of lube oil fractions**,** Manufacture of petroleum wax, Hydrofinishing process.

Petrochemicals: Primary petrochemicals such asethylene, propylene, butadiene, benzene, toluene, xylene and their derived polymers.

Course Learning Outcomes (CLO):

Upon completion of this course, the students will be able to:

1. select the appropriate characterization parameters.
2. specify the properties of petroleum products.
3. attain knowledge of various separation & conversion processes involved in petroleum refining.
4. attain knowledge of manufacturing of various petrochemical products.

***Text Books*:**

3	Sessional (May includes seminar/assignments/ quiz's etc)	20

UCH604 BIOCHEMICAL ENGINEERING

L	T	P	Cr
3	1	2	4.5

Course Objective:
To apply the chemical engineering principles in biological systems.

Introduction to Biochemical Engineering: Comparative study of chemical and biochemical processes, Basic concepts of microbiology.

Sterilization: Sterilization of air and medium; sterilization of fermentor, thermal death kinetics of microorganisms.

Biochemical Kinetics: Enzyme Kinetics with one or two substrates, modulation and regulation of enzyme activity, enzyme reactions in heterogeneous systems, Immobilized enzyme technology, Industrial application of enzymes.

Microbial Fermentation Kinetics: Fermentation and its classification, Growth-cycle phases (for batch cultivation), Continuous culture, Biomass production in cell culture, Mathematical modeling of batch growth, Product synthesis kinetics, Overall kinetics and thermal death kinetics of cells and spores, Analysis of multiple interacting microbial population.

Bioreactors: Classification and characterization of different bioreactors e.g. batch and continuous, mechanically and non-mechanically agitated, CST type, tower, continuous, rotating, anaerobic etc., Design and analysis of Bioreactors - CSTR and Air Lift Reactor, Scale up considerations of bioprocesses.

Transport Phenomenon in Bioprocess Systems: Agitation and aeration-gas-liquid mass transfer, oxygen transfer rates, determination of k_La, Heat balance and heat transfer correlations – sterilization etc.

Commercial production of bioproducts: Concept of primary and secondary metabolites, Production processes for yeast biomass, antibiotics, alcoholic beverages and other products.

Laboratory work:
Sterilization in steam autoclave, Estimation of reducing sugars (Glucose) by di-Nitro Salicylic Acid (DNS) method in a sample broth; Estimation of dimensionless mixing time in a batch reactor Understanding of dissolved oxygen (DO) measurement system of a bioreactor and its calibration, Estimation of volumetric oxygen transfer coefficient in a fermenter by dynamic gassing out technique; Understanding the functioning of bioreactor and to carry out blank sterilization of the reactor Operation of pH control system of a bioreactor and evaluation of response of the controller to different control settings; Enzyme assay; Enzyme kinetic studies; Demonstration & Examination of different organisms; Determination of microbial cell biomass using spectrophotometer; Microbial growth kinetic study; Immobilization of enzymes, Immobilization of microbial cells.

Course Learning Outcomes (CLO):

Upon completion of this course, the students will be able to:

1. calculate the kinetic parameters of enzymatic reactions.
2. calculate and analyze the kinetic parameters for microbial growth.
3. analyze bioprocess design and operation.
4. select suitable bioreactor.

Text Books:

UCH605 PROCESS UTILITYAND INDUSTRIAL SAFETY

L	T	P	Cr
3	1	0	3.5

Course Objective:
To gain knowledge about different process utilities used in the chemical process industry and issues related to hazards & safety.

Water: Water resources, Storage and characterization, Conditioning.

Steam: Boilers, Steam Handling and distribution, Steam nozzles, Condensate utilization, Steam traps, Flash tank analysis, Safety valves, Pressure reduction valves, Desuperheaters.

Air: Air compressors, Vacuum pumps, Air receivers, Distribution systems, Different types of ejectors, Air dryers.

Hazards and Safety: Classifications and assessment of various types of hazards, Risk assessment methods, General principles of industrial safety, Hazards due to fire, explosions, toxicity and radiations, Industrial hygiene, Maximum allowable concentration and threshold limit value, Protective and preventive measures in hazards control, Introduction to industrial safety regulations.

Case studies of hazardous incidents in industries using HAZOP.

Course Learning Outcomes (CLO):

Upon completion of this course, the students will be able to:

1. calculate the requirements of water and air and their applications as utilities.
2. calculate the steam requirement and its applications as utility.
3. evaluate and apply the various risk assessment methods in industries.
4. do the hazard analysis for different industries using HAZOP.

3	Sessional (May includes tutorials/ assignments/ quiz's etc)	25

UCH801 PROCESS ENGINEERING AND PLANT DESIGN

L	T	P	Cr
3	**0**	**0**	**3.0**

Course Objective:
To provide comprehensive knowledge of various process parameters and economics involved in the development of process and plant design.

Basic Concepts: General design considerations, Process design development, Layout of plant items, Flow sheets and PI diagrams, Economic aspects and Optimum design, Practical considerations in design and engineering ethics, Degrees of freedom analysis in interconnected systems, Network analysis, PERT/CPM, Direct and Indirect costs, Optimum scheduling and crashing of activities.

Flow-sheetSynthesis: Propositional logic and semantic equations, Deduction theorem, Algorithmic flow sheet generation using P-graph theory, Sequencing of operating units, Feasibility and optimization of flow sheet using various algorithms viz, Solution Structure Generation (SSG), Maximal Structure Generation (MSG), Simplex, Branch-and-bound.

Analysis of Cost estimation: Factors affecting Investment and production costs, Estimation of capital investment and total product costs, Interest, Time value of money, Taxes and Fixed charges, Salvage value, Methods of calculating depreciation, Profitability, Alternative investments and replacements.

Optimum Design and Design Strategy: Break-even analysis, Optimum production rates in plant operation, Optimum batch cycle time applied to evaporator and filter press, Economic pipe diameter, Optimum insulation thickness, Optimum cooling water flow rate and optimum distillation reflux ratio.

Course Learning Outcomes (CLO):

Upon completion of this course, the students will be able to:

1. apply various algorithms to synthesize a process flow sheet.
2. calculate different costs involved in a process plant.
3. calculate interest and time value of investments.
4. measure profitability on investments.
5. perform breakeven analysis and optimum design of a process.

UCH893 CAPSTONE PROJECT

L	T	P	Cr
0	**0**	**2**	**8.0**

Course Objective:
A design project based course to implement integrated approach to the process and plant design of chemical process system/plant using chemical engineering courses studied in the previous semesters.

Scope of work:

Capstone project is focused on an integrated approach to the design of chemical process/plant using concepts of chemical engineering courses studied in the previous semesters.Chemical process/plantsystems are to be designed satisfying requirements like reliability, optimized design, installation, maintenance, economic, environmental, social, ethical, health,safety and sustainability considerations.

In this course, students are separated in groups. Each student group shall develop a process/system design project related to chemical process/plant involving need analysis, problem definition, analysis, synthesis and optimization. Software like ANSYS, HYSYS, FLUENT and ASPEN etc. along with a spread sheet may be used for the design modeling, synthesis, optimization and analysis.The course concludes with a report submission by the group, final showcase using poster/presentation along with comprehensive viva by a committee.

Course Learning Outcomes (CLO):

The students will be able to:

1. design a chemical process/plant system implementing an integrated approach applying knowledge accrued in various professional courses.

2. work in a team and demonstrate their role in the team work.

3. design, analyze and optimize the design of a chemical process/plant considering various requirements like reliability, optimized design, manufacturing, assembly, installation, maintenance, cost and use of design standards and industry standards.

UCH711 FLUIDIZATION ENGINEERING

L	T	P	Cr
3	1	0	3.5

Course Objective:
To study the fluidization phenomena, fluidized bed regimes and models.

Introduction: Fluidization phenomenon, Liquid-like behaviour of a fluidized bed

Industrial Applications: Physical operations, Synthesis reaction, Cracking of hydrocarbons, Combustion, Incineration, and gasification.

Fluidization and Mapping of Regimes: Distributors, Gas jets in fluidized beds, Pressure drop in fixed beds, Geldart classification of particles, Gas fluidization with and without entrainment, Mapping of fluidization regimes.

Fluidized Beds: Dense beds, Bubbling fluidized beds, Entrainment from fluidized beds, High velocity fluidization, Solids mixing, segregation, and staging, Gas dispersion and interchange in bubbling beds, Heat and mass transfer, Industrial applications.

Fluidized Bed Models: CSTR model, Two region model, Kunii-Levenspiel model.

Course Learning Outcomes (CLO):

Upon completion of this course, the students will be able to:

1. understand the fluidization phenomena and operational regimes.
2. design various types of gas distributors for fluidized beds and determine effectiveness of gas mixing at the bottom region.
3. analyze fluidized bed behavior with respect to the gas velocity.
4. develop and solve mathematical models of the fluidized bed.

Text Books:
1. *Kunii, D., Levenspiel, O. and Robert, E., Fluidization Engineering, Butterworth-Heinemann (1991).*
2. *Coulson, J.M., and Richardson, J.F., Chemical Engineering, Vol. 2, Asian Books Private Limited (2002).*

Reference Books:

1	MST	30
2	EST	45
3	Sessional (May includes tutorials/assignments/quiz's etc)	25

UCHXXX ADVANCED SEPARATION PROCESSES

L	T	P	Cr
3	**1**	**0**	**3.5**

Course Objective:
To understand the underlying principles and modelling and design concepts of novel separation techniques and their applications.

Introduction: Fundamentals of separation processes and basic concepts.

Adsorptive Separation: Definition, Types of adsorption, Adsorbent types, Preparation and properties, Types of adsorption isotherms and their importance, Mathematical modeling under different conditions, Cases such as thermal swing, pressure swing, and moving bed adsorption, Desorption.

Membrane Separation:Synthesis and characterization of membranes, Transport processes in membrane, Modeling of reverse osmosis (RO), Ultrafiltration (UF) and gaseous separations, Supported liquid membrane and immobilization, Facilitated transport, Design, Operation, Maintenance and industrial applications of different membrane separation processes such as RO, UF, Nano-filtration (NF), Pervaporation through non-porous membranes, External field induced membrane separation processes for colloidal particles, Fundamentals of various colloid separation, Derivation of profile of electric field strength, Coupling with membrane separation and electrophoresis, electrodialysis.

Liquid Membranes: Fundamentals and modeling, Micellar enhanced separation processes, Cloud point extraction, Centrifugal Separation processes and their calculations, Ion exchange and chromatographic separation processes.

Surfactant Based Separation Processes: Concept, Modeling and design aspects and applications.

Supercritical FluidExtraction: Concept, Modeling and design aspects and applications.

Biofiltration: Concept, Modeling and design aspects and applications.

Course Learning Outcomes (CLO):

Upon completion of this course, the students will be able to:

- develop models and the solutions for adsorptive separation processes.
- characterize the membrane.
- use the concepts of membrane separation techniques for industrial separations.
- solve problems involving separation based on liquid membrane.
- exposure to other new separation techniques - surfactant based, supercritical fluid extraction and bio-filtration.

Text Books:

1. *D. M. Ruthven, Principles of Adsorption and Adsorption Processes, John Wiley (1984).*
2. *M. Mulder, Basic Principles of membrane Technology, Springer (1996).*

3. *M. A. McHugh and V.J. Krukonis, Supercritical Fluid Extraction, Butterworth (1985).*

Reference Books:

2	EST	45
3	Sessional (May includes tutorials/assignments/ quiz's etc)	25

UCH713 CORROSION ENGINEERING

L	T	P	Cr
3	1	0	3.5

Course Objective:
To provide an understanding of the corrosion principles and engineering methods used to minimize and prevent the corrosion.

Basic concepts: Definition and importance, Electrochemical nature and forms of corrosion, Corrosion rate and its determination.

Electrochemical thermodynamics and kinetics: Electrode potentials, Potential-pH (Pourbiax) diagrams, Reference electrodes and experimental measurements, Faraday's laws, Instrumentation and experimental procedure.

Galvanic and concentration cell corrosion: Basic concepts, Experimental measurements, and determination of rates of galvanic corrosion, Concentration cells.

Corrosion measurement through polarization techniques: Tafel extrapolation plots, Polarization resistance method, Commercial corrosion probes, Other methods of determining polarization curves.

Passivity: Basic concepts of passivity, Properties of passive films, Experimental measurement, Applications of Potentiostatic Anodic Polarization, Anodic protection.

Pitting and crevice corrosion: Mechanisms of pitting and crevice corrosion, Secondary forms of crevice corrosion, Localized pitting, Metallurgical features and corrosion: Inter-granular corrosion, Weldment corrosion, De-alloying and dezincification.

Environmental induced cracking: Stress corrosion cracking, Corrosion fatigue cracking, Hydrogen induced cracking, Methods of prevention and testing, Erosion, Fretting and Wear.

Environmental factors and corrosion: Corrosion in water and aqueous solutions, Corrosion in sulphur bearing solutions, Microbiologically induced corrosion, Corrosion in acidic and alkaline process streams.

Atmospheric and elevated temperature corrosion: Atmospheric corrosion and its prevention, Oxidation at elevated temperatures, Alloying, Oxidizing environments.

Prevention and control of corrosion: Cathodic protection, Coatings and inhibitors, Material selection and design.

Course Learning Outcomes (CLO):

The students will be able to:

1. solve problems involving various types of corrosion.
2. select corrosion resistant materials for a given application.
3. select technique for corrosion prevention.

***Text Books*:**

1. *Fontana, M.G., Corrosion Engineering, Tata McGraw-Hill (2008). 3rd ed. (seventh reprint)*

2	EST	45
3	Sessional (may include tutorial/ assignments/quiz's etc.)	25

UCH701 CATALYTIC PROCESSES

L	T	P	Cr
3	1	0	3.5

Course Objective:
To gain the knowledge of catalyst characteristics, mechanism of catalytic reactions, and design of catalytic reactors.

Introduction: Catalysis and catalysts – homogeneous & heterogeneous, Classification of catalytic reactions and catalysts, Commercial chemical catalysts, Steps in catalytic reactions.

Preparation and Properties of Catalysts: Methods of catalyst preparation, Physical properties of catalyst – surface area, pore volume, pore size distribution, solid density, particle density, bulk density, void volume, Catalyst promoters & inhibitors, Catalyst accelerators & poisons.

Adsorption and Catalytic Reactions: Adsorption isotherms, Surface reaction, Single site and dual site mechanism, Desorption, Catalyst deactivation, Pore structure and surface area estimation and their significance.

External Transport Processes: Fluid particle mass and heat transfer, Mass transfer-limited reactions in packed beds, Non-isothermal behavior of packed-bed reactors, Staged packed-bed reactors for approaching optimum temperature progression, Stable operating conditions in reactors and hot spot formation, Effect of external transport processes on selectivity under non-isothermal conditions.

Diffusion and Reaction in Porous Catalysts: Intra-pellet mass transfer and diffusion in cylindrical and spherical porous catalyst particles, Thiele modulus, Diffusion controlled and surface reaction controlled kinetics, Effectiveness factor for catalysts, Effects of heat transfer – temperature gradients across fluid-solid film and across catalyst pellet, Fluidized bed reactors, Three phase reactors – slurry and trickle bed reactors.

Generalized Design: Design of catalytic reactors under adiabatic and non-adiabatic conditions, Design of industrial fixed-bed, fluidized-bed and slurry reactors.

Course Learning Outcomes (CLO):

Upon completion of this course, the students will be able to:

1. develop various catalytic reaction mechanisms.
2. characterize a catalyst.
3. assess the effects of external heat and mass transfer effects in heterogeneous catalysis.
4. calculate the effectiveness of a porous catalyst.
5. design different types of reactors for catalytic reactions.

Text Books:

1. *Smith, J.M., Chemical Engineering Kinetics, McGraw-Hill (1981).*
2. *Fogler, H.S., Elements of Chemical Reaction Engineering, Prentice-Hall India (2009).*

1	MST	30
2	EST	45
3	Sessional (May includes tutorials/assignments/ quiz's etc)	25

UCH716 FOOD ENGINERING AND SCIENCE

L	T	P	Cr
3	1	0	3.5

Course Objective: To impart knowledge to the students about food process engineering, preservation, packaging, related hazards and safety.

Introduction: Genaral aspects of food industry, Composition of foods, quality and nutritive aspects, Characteristic features of processed and natural food, Mass and energy balance in food processing operation.

Food Rheology: Characteristics of non-Newtonian fluids, Time-independent and time-dependent non-Newtonian fluids, linear viscoelastic fluids.

Thermal Processing: Canning/retort processing – process design and equipments. Equipment design aspects of pasteurizer, sterilizers, evaporators and concentrators, Dryers and their design parameters – tray dryer, spray dryer, fluidized bed dryer.

Food Preservation: Microbial Survivor Curves, thermal death of microorganisms and D, Z and F value calculation, Spoilage probability, Food preservation by dehydration, irradiation, Food preservation by adding preservatives.

Food Production, Packaging and Storage: Process design aspects for liquid foods such as milk and juices. Concentration with thermal and membranes processes,.Food packaging & product shelf life, Modified atmosphere and controlled atmosphere storage, Aseptic packaging, Freezing and Thawing calculations

Food laws: Legislation, safety and quality control.

Course Outcome
The students will be able to:

1. calculate rheological properties of foods.
2. identify and evaluate various design parameters for equipment involved in thermal processing of food.
3. quantify thermal death of micro-organism and calculate spoilage probability
4. evaluate effect of food processing and packaging /storage on food quality
5. analyze food related hazards and HACCP method.

***Text Books*:**

1. Potter Norman N., Hotchkiss Joseph, Food science, CBS (2005).

UCH834 PROCESS INTEGRATION

L	T	P	Cr
3	**1**	**0**	**3.5**

Course Objective:
To understand the energy and mass targets in design of processes.

Introduction: Process integration, Role of thermodynamics in process design, Concept of pinch technology and its application.

Heat exchanger networks: Heat exchanger networks analysis**,** Simple design for maximum energy recovery, Loop Breaking & Path Relaxation, Targeting of energy, area, number of units and cost, Trading off energy against capital.

Network Integration: Super targeting, maximum energy recovery (MER), Network for multiple utilities and multiple pinches, Grand Composite curve (GCC).

Mass integration: Distillation sequences.

Heat and Power Integration: Columns, Evaporators, Dryers, and reactors.

Case studies: Waste and waste water minimization, Flue gas emission targeting.

Course Learning Outcomes (CLO):

Upon completion of this course, the students will be able to:

1. understand of the fundamentals of process integration.
2. perform pinch analysis.
3. analyze and design heat exchanger networks.
4. minimize the water consumption and waste generation.

Text Books:
1. *Linnhoff, D.W., User Guide on Process Integration for the Efficient Use of Energy, Institution of Chemical Engineers (1994).*
2. *Smith, R., Chemical Process Design and Integration, John Wiley &Sons(2005).*

2	EST	45
3	Sessional (May include tutorial/assignments/quizzes etc.)	25

UCHXXX BIOENERGY ENGINEERING

L	T	P	Cr
3	0	0	3.0

Course Objective:

To understand the fundamentals of energy conversion mechanisms in biomass and biogas.

Sources of bioenergy and classification. Chemical composition and properties of biomass. Energy plantations. Size reduction, Briquetting, Drying, Storage and handling of biomass.

Feedstock for biogas, Microbial and biochemical aspects- operating parameters for biogas production. Kinetics and mechanism- High rate digesters for industrial waste water treatment.

Thermochemical conversion of lignocelluloses biomass. Incineration, Processing for liquid fuel production. Pyrolysis -Effect of particle size, temperature, and products obtained.

Thermochemical Principles: Effect of pressure, temperature, steam and oxygen. Fixed and fluidized bed Gasifiers- Partial gasification of biomass.

Combustion of woody biomass and rice husk. Cogeneration using bagasse.

Course Learning Outcomes (CLO):

Upon completion of this course, the students will be able to:

1. identify the sources of bioenergy and their classification.
2. identify and understand the various processes for bioenergy production.
3. identify the thermochemical principles involved in gasification of biomass.

Text Books:

1. Chakraverthy A., “Biotechnology and Alternative Technologies for Utilization of Biomass or Agricultural Wastes”, Oxford & IBH publishing Co, 1989.
2. Mital K.M., “Biogas Systems: Principles and Applications”, New Age International publishers (P) Ltd., 1996.

UCHXXX FUEL CELL TECHNOLOGY

L	T	P	Cr
3	0	0	3.0

Course Objective:
To understand the fundamentals of fuel cell system design and applications.

Overview of fuel cells: Low and high temperature fuel cells; Fuel cell thermodynamics - heat, work potentials, prediction of reversible voltage, fuel cell efficiency.

Fuel cell reaction kinetics: Electrode kinetics, overvoltage, Tafel equation, charge transfer reaction, exchange currents, electro-catalyses - design, activation kinetics, Fuel cell charge and mass transport - flow field, transport in electrode and electrolyte.

Fuel cell characterization: In-situ and ex-situ characterization techniques, i-V curve, frequency response analyses.

Fuel cell modelling and system integration: 1D model - analytical solution and CFD models.

Course Learning Outcomes (CLO):
Upon completion of this course, the students will be able to:
1. solve the energy conservation equations and estimate the fuel cell efficiency.
2. solve the electrochemical kinetics of fuel cell.
3. identify the techniques for fuel cell characterization.
4. develop the analytical & CFD models of fuel cells.

Text Books:
1. Fuel Cell System, edited by Leo J.M.J. Blomen and michael N. Mugerwa, New York, Plenum Press, 1993.
2. Basu, S., Fuel Cell Science and Technology, Springer, New York, 2007.

Reference Books:

3.	Sessional (may include assignments/quizzes etc.)	20

UCH840 POLYMER SCIENCE AND TECHNOLOGY

L	T	P	Cr
3	0	0	3.0

Course Objective:
To provide fundamental and applied knowledge of polymers and their synthesis, manufacture, processing and characterization.

Introduction: Basic concepts of polymer science, Classification of polymers, Average molecular weight and Molecular weight distribution.

Polymerization: Mechanism and kinetics of: Free radical addition polymerization, Ionic addition polymerization, Coordination polymerization, Step growth polymerization.

Structure and Properties: Thermal transitions, Crystallinity, Molecular weight characterization, Nuclear Magnetic Resonance (NMR) and Fourier Transform Infrared (FTIR) techniques.

Plastic Technology: Introduction, Rheology, Mixing and Compounding, Extrusion, Compression molding, Transfer molding, Injection molding, Blow molding, Calendering, Coating, Casting, Thermoforming.

Fiber Technology: General principles, Spinning, Fiber treatment, Properties.

Elastomer Technology: Natural and synthetic elastomers, Processing, Properties.

Manufacture: Brief description of manufacture, properties and uses of Polyethylene, Polypropylene, Polyvinylchloride, Polystyrene, Nylon, Polyethylene terephthalate.

Polymer Blends: Types, Compatibility, Thermal and Mechanical Properties.

Polymer Composites: Types, Properties, Preparation, Fibre-reinforced composites, In-situ composites.

Polymer Nanocomposites: Basic concepts, Processing, Characterization.

Course Learning Outcomes (CLO):

Upon completion of this course, the students will be able to:

1. Identify the synthesis technique for different polymers.
2. Differentiate various polymers on the basis of their thermal transitions and molecular weight.
3. Analyze the various polymer processing techniques.
4. Carry out a comparative analysis of the properties and applications of polymer blends, composites and nanocomposites.

Text Books:

1. *Billmeyer, F.W. Jr., Text Book of Polymer Science, Wiley & Sons (2005).*
2. *Kumar, A., Gupta, R. K., Fundamentals of Polymers, McGraw Hill (1998).*

1	MST	30
2	EST	50
3	Sessional (may include assignments/quizzes etc.)	20

UCHXXX POLYMER BLENDS AND COMPOSITES

L	T	P	Cr
3	0	0	3.0

Course objective: To study the properties and manufacturing methods of thermoset and thermoplastic blends and composites.

Introduction: Blends; Composites; Material property envelope; Different types of reinforcements; Fibres; Matrices; Interface; Compatiblizers; Polymer processing.

Fibre Architecture Reinforcement geometry and scale; Fibre volume fraction and voids; Packing arrangement; Orientation of reinforcement.

Reinforcement Processes: Load sharing; Elastic stress transfer (Cox shear-lag theory); Stress transfer by slip; Effect of aspect ratio; Deformation in long fibre composites (axial and transverse).

Interfacial Effects: Enhancing the compatibility between fibre and matrix interface; Measuring interfacial properties.

Elastic Deformation of Laminates: Axial and transverse stiffness of unidirectional laminae; Off-axis loading and interaction effects; Multi-ply laminates.

Mechanical Properties: Inelastic processes; Predicting the strength of composites; Structure-processing-property correlations, Toughness.

Manufacturing: Manufacturing methods for thermoset and thermoplastic matrix composites.

Course learning outcomes (CLO)

Students will be able to:
1. correlate fibre architecture and reinforcement properties.
2. identify compatibilizers for polymer blends for improving interfacial properties.
3. calculate the elastic and inelastic properties of laminates and composites.
4. select manufacturing methods for thermoset and thermoplastic matrix composites.

Text Book

1. D. Hull, T.W. Clyne, “An Introduction to Composite Materials”, Cambridge University Press.

Recommended Books

1. M.R. Piggott, “Load Bearing Fibre Composites”, Pergamon

2.	EST	50
3.	Sessionals (May include assignments/quizzes etc.)	20

UCHXXX PETROLEUM DRILLING AND PRODUCTION ENGINEERING

L	T	P	Cr
3	0	0	3.0

Course Objective: To impart knowledge of oil well drilling and its production.

Section A: OIL & GAS WELL DRILLING

Well planning: Drilling planning approaches, Evaluation of pore & fracture pressure, Casing seat selection.

Rotary Drilling Method: Rig parts, selection and general layout. Advancements in Rig Equipment: Top drive & Bottom drive systems.

Drilling Operations & Practices: Hoisting, Circulation, Rotation, power plants and Power transmission.

Drilling Fluids: Types, function, properties, equipments & Design.

Cementing: Methods, Tools & Techniques, cementing calculations, Special Cement System.

Wire Lines: Types & Classification, service life evaluation & precautions in handling.

Drill Bits: Types and Application, selection, design & performance.

Drill String & Casing String: Parts, function & operations. Selection/ Design.

Drilling Problems, their control & Remedies: Pipe sticking, Sloughing Shales, Lost Circulation, Blow Outs.

Oil Well Fishing: Fish classification, tools and techniques.

Fundamental of directional drilling

Section B: OIL & GAS PRODUCTION

Well equipment: Well head assembly, Christmas tree, valves, hangers, flow control devices, packers, tubular and flow lines, safety & control systems.

Well completion: Systems, types and applications.

Well perforation & Well activation

Processing in oil fields: GGS/CTF - layout, sequential treatment, separation, storage and transportation of petroleum. Demulsification & desalting.

Introduction to well servicing and stimulation system: objectives and applications.

Course Learning Outcomes (CLO):

Upon completion of this course, the students will be able to:

1. Explain the basic procedures and role of all fundamental systems used in petroleum drilling.
2. Develop awareness of the multiple aspects of drilling operations and the challenge of analysing and synthesizing the numerous technical issues encountered during drilling.
3. Explain basic concepts and methods of oil & gas production and technologies for its recovery.

4. Analyse the key issues in the design and optimisation of petroleum production systems.

Text Books:

1. Drilling Engineering: A Complete Well Planning Approach by Neal J. Adams, Penn Well Publishing Company, Thlsa, Oklahoma, 1985.

UCHXXX NATURAL GAS ENGINEERING

L	T	P	Cr
3	0	0	3.0

Course Objective: To impart the knowledge and general expertise in transport, processing, thermodynamics, storage and energy conversion of natural gas.

Introduction: Composition of Natural Gas, Utilization of Natural Gas, Natural Gas Industry, Natural Gas Reserves, Types of Natural Gas Resources, Future of the Natural Gas Industry.

Properties of Natural Gas: Physical properties of natural gas and hydrocarbon liquids associated with natural gas. Reservoir aspects of natural gas.

Gas Compression: Types of Compressors, Selection, Thermodynamics of Compressors, Compression calculations. Heat and Mass Transfer Principles and Applications in Natural Gas Engineering, Use of Mollier Diagrams.

Gas Flow Measurement: Process control and instrumentation in natural gas processing plants.

Natural Gas Processing: Field separation and oil absorption process, Refrigeration and low temperature processing, Liquefaction Process, Dehydration of Natural Gas, Sweetening of Natural gas and sulphur recovery. Processing for LPG, CNG, system, Conversion of gas to liquid.

Gas Gathering, Transport and Storage: Gas Gathering System. Steady Flow in Simple Pipeline System, Steady State and non-Steady State Flow in Pipelines, Solution for Transient Flow. Transmission of Natural Gas, Specifications. Underground Storage and Conservation of Natural Gas.

Unconventional gas: Coal Bed Methane, Natural Gas Hydrate, Basin Centered Gas, Tight Gas Sands, Shale Gas. Current Technology for Shale Gas and Tight Gas Exploration and Production.

LNG: Production and Utilization

Issue and Challenges to Enhance Supply of Natural Gas.

Course Learning Outcomes (CLO):

Upon completion of this course, the students will be able to:

1. Develop thorough understanding of natural gas properties, compression and its flow measurement.
2. To apply scientific and engineering principles to natural gas processing, gathering, transport & storage.
3. Develop the understanding of unconventional gas exploration and its production.

Text Books:

1. Handbook of Natural Gas Engineering by Donald L. Katz.
2. Natural Gas: A Basic Handbook by James G. Speight.

UCHXXX MATERIALS AND DEVICES FOR ENERGY CONVERSION

L	T	P	Cr
3	0	0	3.0

Course Objective:
To understand the fundamentals and scope of available materials and device fabrication techniques in energy applications.

Physics of semiconductor devices: Basics of solar cells High efficiency solar cells, PERL Si solar cell, III-V high efficiency solar cells, GaAs solar cells, tandem and multi-junction solar cells, solar PV concentrator cells and systems, III-V, II-VI thin-film solar cells (GaAs, Cu(In,Ga)Se2, CdTe) Nano-, micro- and poly-crystalline Si for solar cells, mono-micro silicon composite structure, crystalline silicon deposition techniques, material and solar cell characterization, advanced solar cell concepts and technologies (Porous Si layer transfer, Metal induced crystallization, etc.). Amorphous silicon thin-film (and/or flexible) technologies, multi-junction (tandem) solar cells, stacked solar cells. Conjugated polymers, organic/plastic/flexible solar cells, polymer composites for solar cells, device fabrication and characterization.

Characterization of Solar Cells: Spectral response of solar cells, quantum efficiency analysis, dark conductivity, I-V characterization.

Device fabrication technologies: diffusion, oxidation, photolithography, sputtering, physical vapor deposition, chemical vapor deposition (CVD), plasma enhanced CVD (PECVD), hot wire CVD (HWCVD), etc.

Materials and devices for energy storage: Batteries, CNTs for hydrogen storage, CNT-polymer composites, ultra-capacitors etc. Polymer membranes for fuel cells, PEM fuel cell, Acid/alkaline fuel cells.

Course Learning Outcomes (CLO):

Upon completion of this course, the students will be able to:
1. know the material characterization techniques.
2. know the fundamentals of semiconductor physics
3. know the device fabrication techniques.
4. know the materials for energy storage systems.

Text Books:

1. Semi-conductors for solar cells, H. J. Moller, Artech House Inc, MA, USA, 1993.
2. Solid State electronic devices, Ben G. Streetman, Prentice-Hall of India Pvt. Ltd., New Delhi 1995.

3. Carbon nanotubes and related structures: New material for twenty-first century, P. J. F. Harris, Cambridge University Press, 1999.

Reference Books:

1. Solar cells: Operating principles, technology and system applications, by Martin A. Green, Prentice-Hall Inc, Englewood Cliffs, NJ, USA, 1981.

UCHXXX ENERGY MANAGEMENT

L	T	P	Cr
3	0	0	3.0

Course Objective:

To introduce the energy management principles related to process industries.

Introduction: Importance of energy management. Energy auditing: methodology, analysis of past trends plant data), closing the energy balance, laws of thermodynamics, measurements, portable and on line instruments. Energy economics - discount rate, payback period, internal rate of return, life cycle costing.

Steam Systems: Boiler-efficiency testing, excess air control, Steam distribution & use- steam traps, condensate recovery, flash steam utilisation. Thermal Insulation.

Electrical Systems: Demand control, power factor correction, load scheduling/shifting, Motor drives- motor efficiency testing, energy efficient motors, motor speed control. Lighting- lighting levels, efficient options, fixtures, daylighting, timers, Energy efficient windows.

Mechanical systems: Energy conservation in Pumps, Fans (flow control), Compressed Air Systems, Refrigeration & air conditioning systems.

Waste heat recovery: Recuperators, heat wheels, heat pipes, heat pumps.

Cogeneration: Concept, options (steam/gas turbines/diesel engine based), selection criteria, control strategy. Heat exchanger networking- concept of pinch, target setting, problem table approach, composite curves. Demand side management. Financing energy conservation

Course Learning Outcomes (CLO):

Upon completion of this course, the students will be able to:

1. identify the components involved in energy auditing.
2. explain the energy conservation techniques.
3. evaluate the performance of electrical systems, lighting and pumps.
4. evaluate the performance of industrial boilers, furnaces, cogeneration options.

Text Books:

1. Nagabhushan Raju, K., Industrial Energy Conservation Techniques: Concepts, Applications and Case Studies, Atlantic Publishers & Distributors (2007).

2. Industrial Energy Conservation Manuals, MIT Press, Mass, 1982.

1.	MST	30
2.	EST	50
3.	Sessional (may include assignments/quizzes)	20

UCHXXX POLYMER PROCESSING

L	T	P	Cr
3	0	0	3.0

Course objective: To study processing methods for elastomers, thermoplastics, adhesives, fibres and coatings, and to select appropriate processing methods for an engineering application.

Introduction: Polymer classification; Molecular weight distributions; Thermal transitions; Mechanical properties; Polymer solubility; Interfacial Properties; Properties of thermoplastics; Rubber elasticity; Crosslinking; Additives.

Polymer Rheology: Principles of rheology; Rheometry; Constitutive equations; Flow modeling; Dynamic mechanical properties; Viscoelasticity.

Polymer Processing Operations: Rubber compounding; Unit operations in polymer processing; Extrusion and injection molding; Mixing and Compounding; Compression molding, Transfer molding, Blow molding, Calendering, Coating, Casting, Thermoforming. Secondary shaping operations; Polymer blends and composites.

Processing Operation Calculations: Calculations in Extrusion and Injection molding.

Course learning outcomes (CLO)

Students will be able to:
1. Choose appropriate polymer processing operations depending on the material and final product requirements.
2. Identify methods for rheological measurements and analyze the results.
3. Relate properties required and the processing techniques used; such as injection molding, single screw extrusion, twin screw compounding, mixing, thermoforming, blown film, etc.
4. Solve simple flow problems and perform simple calculations in extrusion and injection molding.

Text Book

1. J.R. Fried, "Polymer Science and Technology", 3rd Ed. Prentice Hall, 2014

Reference Books

1. S.L. Rosen, "Fundamental principles of polymeric materials", Wiley
2. T.A. Osswald, "Polymer processing fundamentals", Hanser

Evaluation Scheme:

2.	EST	50
3.	Sessionals (May include assignments/quizzes etc.)	20

UCHXXX STRUCTURAL MATERIALS

L	T	P	Cr
3	0	0	3.0

Course Objective: To give the necessary background to understand the design of suitable microstructures to give desired properties across the full range of materials classes.

Introduction: Stress-strain relationships in linear elastic and non-linear elastic solids; plastic deformation of metals; strengthening mechanisms; micro-mechanisms of plastic deformation and fracture; creep: characteristics of the creep curve, creep mechanisms.

Mechanical Behaviour plastic deformation of polymers; fracture: fracture of brittle materials; brittle-ductile transition; fracture of semi-brittle materials-crack-tip plasticity; fatigue: characteristics of fatigue crack nucleation and growth; the Paris Law and lifetime predictions; rupture life predictions.

Ceramics
Structural ceramics: general considerations; oxide ceramics; silicon carbide.

Composites
Composites: elastic behaviour; strength; toughening.

Polymers
Polymers: structural overview; structural transitions: factors affecting the glass transition temperature in amorphous polymers; crystalline polymers; liquid crystal polymers.

Course Learning Outcomes:

The students will be able to:

1. Apply a quantitative treatment to the properties of materials, and their origin.

2. Perform simple calculations to predict the lifetime of a component subjected to fatigue or creep using data obtained from standard tests.

3. Apply knowledge gained of the processing-microstructure-property relationship to the design of alloys, ceramics, polymers and composites for structural applications.

UCHXXX PETROLEUM RESERVOIR ENGINEERING AND FIELD DEVELOPMENT

L	T	P	Cr
3	0	0	3.0

Course Objective: To impart the in-depth knowledge of petroleum reservoir engineering and field development.

Characteristics of crude oil and natural gas, classification of crude and its physico-chemical properties.

Petrophysical properties of reservoir rocks: porosity, permeability, fluid saturation. Fluid flow through porous media.

Reservoir Fluids: Gas, condensate and oil reservoirs, Reservoir fluid properties. Reservoir fluid sampling and PVT studies.

Thermodynamics of fluid system: Phase behavior of single & multiphase systems,

Reserve Estimation: Material Balance, Volumetric Methods, Reservoir simulation method, Decline curve analysis.

Reservoir energies & drives: Basic drive mechanism, Water influx; Well performance: productivity index, IPR. Water and gas coning, Open flow potential for gas wells.

Applications of horizontal wells, ERD & multi-laterals.

Oil & Gas field development: Oil and gas field development: Principles of oil and gas filed development; rational development plan; well spacing and patterns, Reservoir drives and drive mechanism, Economics of field development.

Course Learning Outcomes (CLO):

Upon completion of this course, the students will be able to:

1. Analyze the petro-physical properties of reservoir rocks and reservoir fluids.
2. Estimate and analyze the thermodynamics of fluid system, reserve estimation and reservoir energies and drives.
3. Analyze the principles of the development for the oil and gas field.

Text Books:

1. Fundamentals of Reservoir Engineering by L.P. Dake, Elsevier, NY, 2010.
2. Basics of Reservoir Engineering by R. Cosse, Editions Technip, Paris, 1993.

2. Reservoir Engineering manual by Frank W Cole, Gulf Publishing Company, Houston, Texas, 1983.
3. Applied Reservoir Engineering (Vol I & II) by C R Smith, G W Tracy, R L Farrar, OGCI and PetroSkills Publications, Tulasa, Oklahoma, 2008.

Evaluation Scheme:

S.No.	Evaluation elements	Weightage (%)
1	MST	30
2	EST	50
3	Sessional (May include Assignments/Quizzes)	20

UCHXXX ENHANCED OIL RECOVERY TECHNIQUES

L	T	P	Cr
3	**0**	**0**	**3.0**

Course Objective: To impart the knowledge and in-depth understanding of enhanced oil recovery techniques.

Introduction: Historical background and review of primary and secondary recovery, injection rate and pressures in secondary recovery. Flood Patterns and Coverage.

Microscopic displacement of fluids in a reservoir: Capillary forces, viscous forces, phase trapping, mobilization of trapped phases.

Macroscopic displacement of fluids in a reservoir: Areal sweep efficiency, vertical sweep efficiency, displacement efficiency, mobility ratio, well spacing.

Flow of immiscible fluids through porous media. Continuity equation, equation of motion, solution methods Water flooding, Fractional flow equation, Frontal advance theory. Recovery efficiency, permeability heterogeneity.

Water flooding performance calculations: Frontal advance method, viscous fingering method, Stiles method, Dykstra-Parsons Method, Water for water flooding.

Chemical Flooding: Polymer flooding and mobility control processes, Micellar/ polymer flooding, phase behavior of micro-emulsions, phase behavior and IFT, wettability alterations, Alkali flooding.

Miscible Displacement Processes: Mechanism of miscible displacement, phase behavior related to miscibility, high pressure gas injection, enriched gas injection, LPG flooding, Carbon dioxide flooding, alcohol flooding.

Thermal Recovery Processes: mechanism of thermal flooding, hot water flooding, cyclic steam injection, estimation of oil recovery from steam drive, in-situ combustion, air requirement for in-situ combustion.

Microbial oil recovery, EOR Project Evaluation.

Course Learning Outcomes (CLO):

Upon completion of this course, the students will be able to:

1. Learn the macroscopic displacement of fluids in a reservoir.
2. Estimate the water flooding performance and chemical flooding.
3. Learn and understand the miscible displacement and thermal recovery processes.

Text Book:

1. Fundamentals of Enhanced Oil Recovery by HK Van Poolen.
